### 3 Odpowiedzi na pytania

If a job fails, where can you look to diagnose the problem?

1. Job history
2. Logging files
3. Microsoft Windows event logs

What types of job steps can be executed?

1. T-SQL
2. ActiveX scripts
3. Operating system commands
4. Executable files

Where would you look to retrieve a list of jobs that have failed?

Odpowiedź: B

What are the three types of alerts that can be created?

1. Performance counters
2. SQL server errors
3. WMI queries

What are the two response actions that can be configured for an alert?

1. Send a notification
2. Execute a job in response to the alert condition

Your Orders database crashed last night, and you have determined that the crash was caused by a data file running out of space. What tool do you use to send a notification to an administrator as well as expand the data file before it runs out of space?

Odpowiedź: A
